

7 Summits Youngstar:

If you thought getting snow pants on your kid was tough, try buying them a full touring kit! Don't worry, we've got you covered like a one-piece snowsuit. Dynafit has taken the next step (or stride) towards making the buying process of ski packages as simple as possible. Skis, premounted bindings, and skins all in one place and ready to go for your miniature mountaineer. If it's time to upgrade from the Contour Kids Touring Set to their first tech setup, there is no easier, or more economical way to go. The Seven Summits Youngstar skis have a full sidewall construction with a Poplar wood core, not like a typical kid's alpine ski that is often made with a foam injected cap construction. The Rotation 7 is a durable, safe, and simple binding that goes down to a 2.5 release value to help accommodate the size of any up-and-coming ripper. Each length from 120cm-160cm has its own sidecut and rocker design so each length has consistent characteristics. The Dynafit Seven Summits Youngstar ski set will work for a 5, 15, or even a 50-year-old of smaller stature, someone that we just consider to be a kid at heart.

Seven Summits Youngstar Ski

5 Lengths to cover a wide range of ages and skier sizes.

Full sidewall wood construction skis for high quality skiability.

Single radius shaping gives each ski length the same characteristics.

Seven Summits+ Skin

Pre-cut to match skis out of the box.

Mixed plush (70% mohair, 30% nylon) maximizes glide and durability.

Speedskin system utilizes a rubber tip and metal tail hook for ease of use.

Rotation 7 Binding

Release value as low as 2.5 allows for lighter skiers to safely enjoy the backcountry.

Two riser heights plus flat mode increase efficiency on the climb.

Adjustable binding accommodates a range of boot sizes.

Skimo Co Says

Usage Getting young ones out in the backcountry, or on-piste touring

Notes Comes premounted with Rotation 7 bindings and includes precut skins.

Bottom Line Finally a simple, ready to ski AT package; just add boots.

Dynafit 7 Summits +:

If you're itching to get going up your local skin track, chomping at the bit, frothing at the mouth, take a look at the [Dynafit](#) Seven Summits+ Complete Alpine Touring Ski Set. It's the ultimate grab and go setup, featuring the [Dynafit](#) Seven Summits+ ski, the proven [Dynafit](#) ST Radical bindings and pre-cut skins to boot. It all adds up to a highly capable backcountry package, but fortunately the grams don't. This setup is as lightweight as they come, helping you to top out with the minimum of effort and scratch that itch once and for all.

Product Details

Rocker Type

Tip Rocker

Sidecut

Single radius – Harmonious sidecut to guarantee balanced skiing qualities.

Shape

Constant Characteristics – Unrivaled interaction between rocker length and sidecut according to ski length. This interplay guarantees consistent properties at every ski length when ski touring.

3D Tip – 3D carbon construction guarantees the best vibration damping characteristics.

Core

Poplar Core

Laminates

Carbon Stringers

Sidewalls

Full Sidewall – Impact-resistant ABS is used along the entire length of the ski for maximum force absorption.

Included Bindings

Bindings Come Mounted to Skis – Always have a certified binding technician adjust your bindings.

Includes Dynafit ST Radical Bindings – Din Range 4 - 10. Adjustment Range 50mm.

Burton Info:

Poles:

Designed specifically for splitboarders, the [Burton](#) x Black Diamond Compactor Adjustable Poles are some of the first snowboard-oriented poles on the market. Constructed from lightweight, yet durable aluminum with a highly compactable 3-section shaft, these poles conveniently pack away for snag-free descents. With uphill treks in mind, the [Burton](#) x Black Diamond Compactor Adjustable Poles are equipped with an extended rubber grip and sink-proof 100 mm powder baskets.

Bindings:

When your significant other tells you, "I think we should split" and proceeds to hand you a large box, you can only hope the box contains the [Burton](#) Hitchhiker Splitboard Bindings and not your belongings. Surely, couples who splitboard together, stick together. These burly, stiff and responsive bindings are equipped with the Spark R&D Tesla System. And when you're riding down you'll instantly feel [Burton](#)'s comfort and performance-focused features bringing your ride to life.

Hometown Hero:

Fresh tracks and undiscovered zones are just a split, glide, and tour away from home thanks to this splitboard.

Because sometimes the best backcountry experiences come with mixed conditions and unexpected terrain, you need a board that rises to every challenge. The Family Tree Hometown Hero Splitboard works well just about anywhere you drop it. Its directional shape and taper keep it agile in powder, while the Split Channel mounting system makes for smooth transitions. From floating through open powder stashes to working through variable conditions, its versatility shines bright no matter where you wind up.

Pow Wrench:

Big float in a small package. This short, wide, and directional shape excels in everything from ankle deep to overhead conditions.

When the snow gods deliver, the Burton Family Tree Pow Wrench Snowboard lights up. The short, floaty shape delivers a quick-turning feel that flows naturally through the trees and comes to life with a loose, floaty ride when the snow really stacks up. Its directional shape and significant taper keep the nose riding high and help power the tail to slash and carve through deep conditions. The Pow Wrench is the only tool you need on a powder day.
